

AMENDMENTS TO THE CLAIMS

1. (Previously presented) A method for electronically searching a user-personalized library of content, comprising:

(a) receiving one or more search terms from a user having an electronically-searchable personalized library of content, the personalized library including a text searchable database and a page image database;

(b) electronically searching the text searchable database for pages of content that match the search terms to produce search results;

(c) providing the search results to the user;

(d) receiving a search result selection from the user;

(e) preparing a substitute image of a page image in the page image database corresponding to the search result selection from the user, wherein a portion of the content in the page image is suppressed in the substitute image in accordance with one or more access rules to limit the amount of content in the substitute image;

(f) providing location information to the user that identifies the location of the search terms in the substitute image; and

(g) providing to the user the substitute image responsive to the user's search result selection such that a portion of the content in the page image is suppressed in the substitute image provided to the user with an instruction to highlight the search terms in the substitute image, wherein the instruction to highlight the search terms in the substitute image comprises an instruction to apply a layer of color on or near the search terms.

2. (Previously presented) The method of Claim 1, further comprising, prior to receiving one or more search terms from the user, establishing an electronically-searchable library of content that includes a page image database and a text searchable database, which library of content is personalized by the user to consist of content selected by the user.

3. (Original) The method of Claim 2, in which the library of content is personalized by manual selection of content by the user.

4. (Original) The method of Claim 2, in which the library of content is automatically personalized based on user selection of content for review or purchase.

5. (Original) The method of Claim 1, in which the user-personalized library of content is established at the time the user conducts the search.

6. (Original) The method of Claim 1, in which the user's personalized library of content is derived from a publicly-accessible general library of content.

7. (Original) The method of Claim 1, in which providing the search results to the user includes providing a list of content having pages with text that matches the search terms.

8. (Original) The method of Claim 7, further comprising ranking the content in the list of content according to a predetermined criterion.

9. (Original) The method of Claim 1, in which providing to the user an image of a page of content includes retrieving the page image from a database of page images stored in computer memory.

10. (Original) The method of Claim 1, in which the user's personalized library is defined after electronically searching a general library of content using the search terms, the user's personalized library being fully contained within the general library of content and defining the scope of search results provided to the user.

11-12. (Canceled)

13. (Previously presented) The method of Claim 1, wherein the instruction to highlight the search terms in the substitute image comprises one of an instruction to apply a layer of color on or near the search terms or an instruction to place a visual indicator next to the search terms.

14. (Canceled)

15. (Previously presented) The method of Claim 1, in which the access rules define an aggregate amount of unsuppressed content that can be provided to the user over a time frame.

16. (Previously presented) The method of Claim 1, in which the access rules define a percentage of unsuppressed content that can be provided to the user over a time frame.

17. (Previously presented) The method of Claim 1, in which the access rules define the amount of unsuppressed content that can be provided to the user based on content-specific information.

18. (Previously presented) The method of Claim 1, in which the access rules define the amount of unsuppressed content that can be provided to the user based on user ownership of the content.

19. (Original) The method of Claim 18, further comprising reviewing purchase records to validate user ownership of the content.

20. (Previously presented) The method of Claim 1, in which different access rules apply based on the location of the user.

21. (Previously presented) The method of Claim 1, in which different access rules apply based on the time the content is to be provided to the user.

22. (Previously presented) The method of Claim 1, in which the access rules define the amount of content that can be provided to the user based on an identification of the user.

23. (Previously presented) The method of Claim 2, in which a non-text object in the user's personalized library is made searchable by including text data related to the object in the text searchable database.

24. (Currently amended) A method for preparing a user-personalized library of content for electronic searching and delivery of content to a user, comprising:

(a) acquiring a general library of content that includes images and corresponding text of pages of content;

(b) preparing a page image database comprised of the images of pages of content;

(c) preparing a text searchable database comprised of the corresponding text of pages of content;

(d) receiving from a user a selection of content in the general library to form a user-personalized library of content that the user can electronically search using the text searchable database;

(e) identifying an image of a page of content in the page image database based on a search of the text searchable database; [[and]]

(f) preparing a substitute image of the identified image, wherein the substitute image is modified from the appearance of the identified image to automatically suppress a portion of content of the identified image in accordance with one or more access rules to limit the amount of content in the identified image, such that when the substitute image is displayed, a portion of the content in the identified image is suppressed in the substitute image; and

(g) defining classes of content and assigning content in the user's personalized library to one or more of the classes, and limiting a search of the user's personalized library to content in a specified class.

25-26. (Canceled)

27. (Original) The method of Claim 24, in which the personalized library of content is comprised of content selected by a group of persons constituting a user, the method further comprising enabling persons in the group to conduct searches of the personalized library of content.

28. (Original) The method of Claim 24, in which the user's selection of content in the general library is received based on manual selection by the user.

29. (Currently amended) The method of Claim 24, in which the user's selection of content in the general library is automatically received based on [[the]] the user's review or purchase of the content.

30. (Original) The method of Claim 24, further comprising storing the user-personalized library of content in a memory for later retrieval by the user.

31. (Original) The method of Claim 30, further comprising enabling the user to store and retrieve multiple user-personalized libraries.

32. (Original) The method of Claim 24, in which the user's selection of content in the general library is aided by providing the user with a list of content determined to be related to a subject content.

33. (Currently amended) A computer system that provides electronic searching of a user-personalized library of content, comprising a processor, a search server in communication

with a database server, in which the database server is configured with a general library of content that is accessible to multiple users, the general library including (1) a page image database containing images of pages of content, (2) an access rights database containing access rules that define the scope of content to be displayed to each user, and (3) a text searchable database containing text and identifying information indicating the page images in the page image database that contain the text, the search server being configured with a search engine comprised of computer-implemented instructions that enable the search server to:

(a) receive one or more search terms from a user having established a personalized library within the general library of content,

(b) search the full text of the user's personalized library for pages of content that match the search terms,

(c) provide the results of the full text search to the user for selection by the user,

(d) prepare a substitute image of a page image in the page image database corresponding to the search result selection from the user, wherein a portion of the content in the page image is suppressed in the substitute image in accordance with one or more access rules to limit the amount of content in the substitute image,

(e) ~~provide~~ provide location information to the user that identifies the location of the search terms in the substitute image~~[[:]]~~, and

(f) provide to the user the substitute image responsive to the user's search result selection with an instruction to highlight the search terms in the substitute image, wherein the instruction to highlight the search terms in the substitute image comprises an instruction to apply a layer of color on or near the search terms.

34. (Canceled)

35. (Previously presented) The computer system of Claim 33, in which the access rules define an aggregate amount of unsuppressed content that can be provided to the user over a time frame.

36. (Previously presented) The computer system of Claim 33, in which the access rules define a percentage of unsuppressed content that can be provided to the user over a time frame.

37. (Previously presented) The computer system of Claim 33, in which the access rules define the amount of unsuppressed content that can be provided to the user based on content-specific information.

38. (Previously presented) The computer system of Claim 33, in which the access rules define the amount of unsuppressed content that can be provided to the user based on user ownership of the content.

39. (Original) The computer system of Claim 38, in which the computer-implemented instructions further enable the search server to validate user ownership of the content by reviewing purchase records pertaining to the user.

40. (Previously presented) The computer system of Claim 33, in which different access rules apply based on the location of the user.

41. (Previously presented) The computer system of Claim 33, in which different access rules apply based on the time the unsuppressed content is to be provided to the user.

42. (Previously presented) The computer system of Claim 33, in which the access rules define the amount of unsuppressed content that can be provided to the user based on an identification of the user.

43. (Original) The computer system of Claim 33, in which a non-text object in the user's personalized library is made searchable by including text data related to the object in the text searchable database.

44. (Original) The computer system of Claim 33, in which the search server provides the search results in the form of a list of content having pages with text that matches the search terms, which content in the list of content is ranked according to a predetermined criterion.

45-46. (Canceled)

47. (Previously presented) The computer system of Claim 33, wherein the instruction to highlight the search terms in the substitute image comprises one of an instruction to apply a layer of color on or near the search terms or an instruction to place a visual indicator next to the search terms.
